

Favour Sunday

Software Engineer | Fullstack Developer

Lagos, Nigeria | +234 916 985 7702 | +234 909 200 1540 | sundayfavour997@gmail.com | github.com/Sunday012 | linkedin.com/in/favour-sunday-6059682a2

PROFESSIONAL SUMMARY

Software Engineer and Fullstack Developer with experience building healthcare platforms, AI-powered products, developer tools, email automation systems, payment flows, authenticated dashboards, RBAC-protected admin workflows, and API-driven applications. Strong with Go, TypeScript, Node.js, Express.js, NestJS, PostgreSQL, MySQL, REST APIs, GraphQL, Next.js, React, Vue.js, and Tailwind CSS.

CORE SKILLS

- Languages:** Go, TypeScript, JavaScript, SQL, HTML, CSS
- Server-side:** Node.js, Express.js, NestJS, REST APIs, GraphQL, authentication, authorization, cron jobs, background workflows, server-side validation
- Go:** CLI development, net/http, HTTP handlers, JSON APIs, middleware, Go embed, interfaces, package design, tests, error handling
- Databases:** PostgreSQL, MySQL, Firebase, Pinecone, data modeling, CRUD operations, data upserts
- AI & Integrations:** OpenAI API, LangChain, RAG pipelines, Groq API, Llama 3.1, Stripe API, email automation, spam checks, domain verification
- Frontend:** React.js, Next.js, Vue.js, Tailwind CSS, responsive UI, dashboards, forms, design systems
- Healthcare & Security:** HIPAA-aware UX, identity verification, RBAC, protected routes, audit-friendly workflows, LegitScript readiness
- Engineering:** Git/GitHub, CI/CD, agile development, production deployment, performance optimization

EXPERIENCE

Software Engineer Oct 2024 - Jul 2026

ProxyMedicine (prxy.health)

- Built and maintained product features across ProxyMedicine's telehealth platform, including urgent care, weight-loss, lab orders, medications, refills, appointments, patient dashboards, and provider/admin workflows.
- Implemented authenticated dashboard experiences that consume API data for sessions, appointments, labs, medications, payment history, medical plans, prescriptions, and patient tasks.
- Worked on Alfie, the AI health assistant, including chat/onboarding flows, symptom intake, care routing, session handling, and patient-facing guidance across urgent-care and weight-loss journeys.
- Worked on patient onboarding and healthcare workflows including identity verification, health profiles, consent flows, medication-payment tasks, GLP-1 acknowledgement, and support flows.
- Built and refined payment-related experiences for consultations, medication payments, lab checkout, refill payments, and failed-payment recovery.
- Contributed to lab-order flows including catalog/category browsing, lab checkout, result display, clinician interpretation, treatment-plan views, refund requests, and patient-facing status updates.
- Built reusable email templates for appointment reminders, prescription updates, medication payments, refill reminders, lab/admin notifications, identity verification, and patient communications.
- Contributed to healthcare trust and compliance work including HIPAA-aware analytics, identity-verification flows, RBAC-gated provider/admin actions, protected patient-data screens, and LegitScript readiness.

Aug 2025 - Apr 2026

Software Engineer

StatwellMD (statwellmd.com)

- Worked on a modern telemedicine platform supporting remote consultations, prescription management, medical records, appointment scheduling, payments, and healthcare provider workflows.
- Built authenticated patient and admin-facing features using TypeScript, React, API clients, route guards, token persistence, OTP verification, RBAC-aware access patterns, and protected data fetching.
- Contributed to healthcare dashboard flows for patients, appointments, consultations, medications, payment history, and provider/admin operations.
- Implemented and documented StatwellMD design-system tokens for colors, typography, spacing, accessibility states, animations, border radius, and reusable UI styling.

Software Engineer

Oct 2024 - Jul 2026

Demz-Aminytics AI

- Worked across multiple client and internal products as a fullstack developer, turning product requirements into production-ready web experiences.
- Built frontend and server-connected features using React, Next.js, Vue.js, TypeScript, Node.js, REST APIs, GraphQL, PostgreSQL, MySQL, and Tailwind CSS.
- Collaborated across healthcare, AI, education, and developer-tool products, balancing fast delivery with maintainable implementation.

Fullstack Developer

Sep 2024 - Jan 2025

SeaMailer (seamailer.app)

- Built and optimized email automation workflows including welcome series, drip campaigns, and follow-up sequences using NestJS and cron-based scheduling.
- Developed event-based email triggers that allow users to send campaigns from behavioral data and application events.
- Implemented spam detection, blacklist screening, domain verification, and email validation features to reduce bounce rates and improve deliverability.
- Built a responsive Vue.js interface for campaign builders, template editors, and real-time analytics dashboards.
- Helped launch SeaMailer on Product Hunt, where it ranked #2 Product of the Day and #2 Product of the Week in Marketing.

Frontend Engineer

Nov 2024 - Apr 2025

Bloomie (bloomie.com)

- Developed Bloomie, an interactive children's learning application with AI-curated video content and adaptive learning paths.
- Built user-facing learning flows and product interactions focused on retention, content discovery, and a smooth learning experience.
- Helped improve product retention by 35% through more engaging learning paths and polished UI workflows.

Frontend Engineer

2024 - Oct 2025

Utom (utom.dev)

- Worked on a developer-facing product experience using modern TypeScript, React/Next.js, and reusable UI patterns.
- Built product pages, interaction flows, and application interfaces with attention to responsiveness, performance, and maintainable component structure.
- Collaborated on implementation decisions across product UX, frontend behavior, and server-connected application logic.

Software Engineering Fellow

Jul 2024 - Sep 2024

Headstarter AI

- Built and deployed 5 AI products in 5 weeks using React.js, Next.js, Firebase, Clerk, Vercel, OpenAI, Pinecone, LangChain, Stripe, and Groq.
- Developed an interactive customer-support agent with a custom RAG pipeline using OpenAI and Pinecone.
- Built a SaaS flashcard generator using Llama 3.1 through the Groq API, with paywall and pricing-plan integration through Stripe.
- Placed in the top 3 in a hackathon with a GitHub repository review tool using SonarQube.

Chingu

- Developed and deployed a fullstack food-ordering application with secure authentication, checkout, Stripe payment integration, and PostgreSQL-backed order management.
- Led server-side development for order processing, user authentication, database interactions, and API data flow.

PROJECTS

Intersync - Go CLI and Hosted AI Backend

- Built Intersync, a Go developer tool that watches git diffs and turns meaningful code changes into generated learning modules through a detect -> judge -> generate -> merge -> write pipeline.
- Implemented a Go CLI with commands for init, sync, view, install-hook, login, logout, whoami, and version, including git repository detection and post-commit hook installation.
- Designed a provider abstraction for AI backends, supporting cloud, Anthropic, OpenAI, Ollama, and stub providers with fallback behavior when the primary provider fails.
- Built a hosted Go backend for the CLI using net/http, bearer-token authentication, JSON endpoints, request logging, health checks, and server-side OpenAI calls so API keys are not shipped to users.
- Embedded a production frontend build into the Go binary with embed, allowing intersync view to serve a local course viewer without requiring users to install frontend dependencies.

EDUCATION

University of Uyo - Currently pursuing a Computer Science degree

Omole Senior Grammar School, Lagos, Nigeria - High School Degree, August 2023
